Re: **Third Quarter 2006 Groundwater Monitoring
& Groundwater Extraction System Report**
Dave's 76
1666 Main Street
Fortuna, California
LOP #12708
Project # NC-20

Dear Mr. Stone,

This report presents the results of the Third Quarter 2006 groundwater monitoring activities and groundwater extraction system operations at 1666 Main Street, Fortuna, Humboldt County, California (site) (Figure 1), and was prepared for Mr. David Ansley by Blue Rock Environmental, Inc. (Blue Rock).

Background

Site Description

The site is located on Main Street in the City of Fortuna, Humboldt County, California one block north west of the intersection of Main Street and South Fortuna Boulevard (Figure 1). The site is an active service station constructed in 1958 that sells gasoline and diesel fuel. Onsite improvements consist of a single story building, two dispenser islands and three double wall fiberglass wrapped underground storage tanks (UST). The tank complex contains one 6,000-gallon UST storing premium gasoline, one 12,000-gallon UST storing regular gasoline and one 6,000-gallon diesel UST utilizing four fuel dispensers. Water and sewer services at the site are provided by public utilities. The site is paved with asphalt with the exception of the northwest corner in the vicinity of the former waste oil UST.

Site History

In 1995, one waste oil UST was removed by the station owner. Soil and groundwater samples were not collected by the owner. In March 1999, three 6,000-gallon gasoline USTs located in a complex at the eastern end of the property, and one 2,000-gallon diesel UST located approximately 5 feet west of the south fuel dispenser island were removed by Beacom Construction of Fortuna, California. The removed USTs were replaced with the previously mentioned current UST system.

During UST excavation activities of March 1999, visibly contaminated soil was removed through over excavation of the tank pits which formerly contained the diesel and gasoline USTs. Approximately 450 cubic yards of petroleum contaminated soil were removed from the excavations. The soil was stockpiled on site and covered with plastic sheeting. Analytical results of samples collected from the excavations confirmed the presence of gasoline and diesel range hydrocarbons in the soil and groundwater.

The excavation was deepened below first encountered groundwater. Groundwater was encountered in the excavations at a depth of approximately 5.5 feet below ground surface (bgs). Groundwater was pumped from the excavation into an onsite holding tank. In April 1999, Clearwater Group (Clearwater) installed an aeration system onsite and groundwater in the holding tank was aerated by pumping air into the standing water. This was performed to volatilize some of the existing hydrocarbons prior to offsite disposal. Aerated groundwater was subsequently disposed of offsite by a licensed contractor. As previously mentioned, the new USTs were installed in the existing excavation. The excavation associated with the diesel UST was subsequently backfilled with clean imported gravel.

Site Investigation and Corrective Action History

In September 2000, Clearwater supervised Denbeste Trucking of Windsor, California in the removal of soil generated during the over excavation activities of March 1999. Approximately 724 tons of petroleum impacted soil was transported to Forward Inc. in Manteca, California. Soil below the former stockpile was sampled per Humboldt County Division of Environmental Health (HCDEH) requirements.

On January 8, 9, and 12, 2001, Clearwater supervised Clearheart Drilling of Santa Rosa, California in the drilling of 11 soil borings. On February 14, 2001, three 2-inch monitoring wells (MW-1 to MW-3) were installed in accordance with Clearwater's *Revised Subsurface Investigation Workplan* dated November 3, 1999. Well construction details are presented in Table 2. Data collected during this phase of investigation confirmed the presence of gasoline, diesel and motor oil range hydrocarbons in soil and groundwater at the subject site. Results of the subsurface investigation are presented in Clearwater's *Subsurface Investigation Report* dated March 22, 2001. Historical monitoring well construction data are summarized in Table 1.

On November 15, 2001, Clearwater supervised Mitchell Drilling Environmental (MDE) of Rancho Cordova, California in the installation of five 2-inch diameter monitoring wells (MW-4, through MW-8) in accordance with Clearwater's *Plume Delineation Workplan / Sensitive Receptor Survey* dated July 19, 2001. Results of the subsurface investigation are presented in Clearwater's *Additional Investigation and Fourth Quarter 2001 Quarterly Monitoring Report* dated January 10, 2002.

On June 10, 2002, Clearwater supervised MDE in the installation of four 2-inch diameter monitoring wells (MW-9, through MW-12) in accordance with Clearwater's *Workplan for Additional Investigation* dated April 8, 2002. Results of the subsurface investigation are

presented in Clearwater's *Additional Investigation and Second Quarter 2002 Quarterly Monitoring Report* dated July 31, 2002.

On October 11, 2002, Clearwater supervised MDE in the installation of two 2-inch diameter monitoring wells (MW-13 and MW-14) in accordance with Clearwater's *Workplan for Additional Investigation* dated August 30, 2002. Results of the subsurface investigation are presented in Clearwater's *Additional Investigation and Fourth Quarter 2002 Quarterly Monitoring Report* dated November 25, 2002.

In accordance with Clearwater's *Workplan for Additional Investigation* dated February 20, 2003, Clearwater supervised MDE in drilling four 8-inch diameter soil borings on June 10, 2003 (MW-15 through MW-18). Results of the subsurface investigation are presented in Clearwater's *Additional Investigation and Third Quarter 2003 Groundwater Monitoring Report* dated August 5, 2003.

On February 11, 2004, Clearwater submitted a *Corrective Action Plan* (CAP) to the HCDEH. In a letter dated February 23, 2004 the HCDEH concurred with the proposed remedial action contained in the CAP. In the letter, the HCDEH recommended abandonment of MW-1, MW-2, and MW-4 prior to implementation of the proposed excavation activities. In May 2004, Blue Rock was retained by Mr. Ansley to continue site work. MW-1, MW-2, and MW-4 were destroyed per HCDEH request in June 2004.

Between the dates of October 19 and October 29, 2004, Blue Rock and Van Meter Construction completed remedial activities associated with the removal and disposal of 790 tons of contaminated soil and approximately 4,000 gallons of groundwater associated with the former UST fuel system at the subject site. Blue also installed one groundwater extraction trench for future connection to a remedial compound.

On October 22, 2004, Blue Rock proposed to relocate the position of proposed extraction trench EX-1. The proposed change was based on subsurface conditions, logistics and cost. The HCDEH concurred with this proposal in a letter dated October 26, 2004. Upon completion of the excavation activities described above Blue Rock prepared and submitted a *Remedial Report of Findings* dated November 12, 2004.

On December 20, 2004 Blue Rock performed a constant discharge aquifer test on EX-1 to determine specifications for the groundwater extraction system proposed in the *CAP* dated February 11, 2004 prepared by Clearwater. Blue Rock subsequently prepared and submitted a *Constant Discharge Aquifer Test and Groundwater Extraction Treatment System Design Report* dated February 3, 2005. The groundwater extraction treatment system design was approved by the HCDEH in a letter dated February 24, 2005.

On March 9 and 10, 2005, Blue Rock supervised Sustainable Technologies of Alameda, California install the approved skid mounted groundwater extraction system. The GWE system installation was documented with the submittal of Blue Rock's *Groundwater Extraction*

Treatment System Installation Report dated March 31, 2005. Startup of the groundwater extraction / treatment (GWE) system was commenced on September 6, 2005.

Field and Laboratory Activities

Groundwater Monitoring Activities

On July 10, 2006, 15 wells (MW-3 and MW-5 through MW-18) were gauged and subsequently sampled on July 10 and 11, 2006. Prior to sampling, an electronic water level indicator was used to gauge depth to water in each well, accurate to within ± 0.01 -foot. All wells were checked for the presence of light non-aqueous phase liquid (LNAPL) petroleum prior to purging. No measurable thicknesses of LNAPL were observed on groundwater in any of the wells.

In preparation for sampling, the wells were purged of groundwater until sampling parameters (temperature, pH, and conductivity) stabilized. Following recovery of water levels to approximately 80% of their static levels, groundwater samples were collected from the wells using disposable polyethylene bailers and transferred to laboratory supplied containers. Sample containers were labeled, documented on a chain-of-custody form, and placed on ice in a cooler for transport to the project laboratory.

Purging instruments were cleaned between use by an Alconox® wash followed by double rinse in clean tap water to prevent cross-contamination. Purge and rinsate water was stored on-site in labeled 55-gallon drums pending future removal and disposal.

Groundwater monitoring and well purging information is presented on Gauge Data/Purge Calculations and Purge Data sheets (attached).

Groundwater Sample Analyses

Groundwater samples were analyzed by Kiff Analytical (Kiff), a DHS-certified laboratory, located in Davis, California, for the following analytes:

- TPHd by EPA Method 8015M (silica gel cleanup)
- TPHg, BTEX, MTBE by EPA Method 8260B
- TPHmo by EPA Method 8015M (silica gel cleanup) (MW-8 only)

Groundwater Monitoring Results

Groundwater Flow Direction and Gradient

Static groundwater in the wells was present beneath the site at depths ranging from approximately 4.70 (MW-8) to 12.92 (MW-3) feet bgs, while the groundwater extraction system was active. Gauging data, combined with well elevation data, were used to calculate groundwater elevation, and to generate a groundwater elevation and gradient map (Figure 3).

Based on groundwater elevation data collected during this monitoring event, it appears groundwater extraction from EX-1 has created a capture zone of at least 75 feet downgradient (south) of the former USTs (Figure 3). This empirical capture zone correlates well with the estimated downgradient capture zone of 60 feet by Blue Rock in the *Constant Discharge Aquifer Test and Groundwater Extraction Treatment System Design Report* dated February 4, 2005. Groundwater in the area south of the site, beyond the capture zone, has generally displayed a southerly flow regime; however, a low gradient southwesterly flow direction was observed during this event.

Groundwater Analytical Results

LNAPL:	None
TPHg concentration:	<50 µg/L (14 wells) to 2,000 µg/L (MW-7)
TPHd concentration:	<50 g/L (14 wells) to <600µg/L (MW-7)
MTBE concentration:	<0.5 µg/L (6 wells) to 370 µg/L (MW-7)
Benzene concentration:	<0.5µg/L (14 wells) to 32 µg/L (MW-7)

Groundwater sample analytical results are shown graphically on Figures 4, 5, and 6. Cumulative groundwater sample analytical results are summarized in Table 2. Copies of the laboratory report and chain-of-custody form are attached.

Groundwater Extraction System Startup and Operations

Groundwater Extraction/Treatment System Startup

Startup of the groundwater extraction / treatment (GWE) system was commenced on September 6, 2005. Startup consisted of the initiation of pumping groundwater from extraction well EX-1. Following startup, the system was monitored and subsequently adjusted to maximize the pumping rate from EX-1. In accordance with the North Coast Unified Air Quality Management District (NCUAQMD) Authority to Construct Permit # NAC 472, air above the treated water discharge point was collected and analyzed for TPHg, BTEX and MTBE.

Operational Data - Groundwater Extraction/Treatment System

Extracted groundwater is treated by passing it through two liquid-phase carbon vessels arranged in series (Figure 7). The electric pump is set at depth of approximately 16.5 feet bgs (2.5 feet off the bottom of EX-1). The low and high water switches for the pump are placed at approximately 15 and 16 feet bgs, which maximizes drawdown in EX-1, without allowing the water level to drop below the pump inlet. The pump cycles on and off between these depths. Influent samples are collected at sample port (Influent), located before the 300 gallon transfer tank (Table 3). Effluent samples are collected at a sample port (Effluent), located downstream of the second carbon vessel (Table 3). Treated groundwater is then discharged to the sanitary sewer located in the remedial compound. The groundwater treatment system is operated in accordance with the Fortuna Public Works Department.

The following is a summary of operational data pertaining to the groundwater extraction / treatment system:

• GWE system started:	9/6/05
• Monitoring events this period:	5/3/06, 6/5/06, 7/7/06
• Total effluent discharge:	512,730 gals (since startup in 9/6/05)
• Effluent discharge this period:	146,390 gals
• Operational depth to water in EX-1:	~15 to ~16 feet bgs
• Total TPHg mass recovery:	0.99 lb. to date (Table 4)
• TPHg mass recovery this period:	0.28 lb. (Table 4)

System Status - Groundwater Extraction/Treatment System

Groundwater has been extracted from extraction basin EX-1 since initial startup on September 6, 2005. Effluent water samples collected were below laboratory detection limits for all analytes with the exception of MTBE detected at a concentration of 0.76 µg/L and 0.57 µg/L on April 4, 2006 and July 7, 2006 respectively. Blue Rock will continue to evaluate breakthrough of MTBE in the system effluent and change out the carbon as necessary. Air samples collected per the NCUAQMD permit were below detection limits for all analytes (Table 5). Based on the groundwater elevation data collected during the previous event, it appears that operation of the GWE is producing a zone of capture, which extends approximately 75 feet downgradient of the former USTs.

Project Status and Recommendations

- Blue Rock recommends the preparation of a workplan which will address the installation of one groundwater monitoring well in the vicinity of the previously destroyed MW-2 to more effectively monitor temporal trends in the magnitude and extent of offsite petroleum hydrocarbon impact and the vertical delineation of dissolved phase MTBE onsite.
- Blue Rock recommends deleting TPHd from the quarterly analytical suite with the exception of groundwater samples collected from MW-7 and MW-8.
- The site is currently being monitored on a quarterly basis per the HCDEH directives. The next quarterly sampling event is scheduled for October 2006. Groundwater samples will be analyzed for TPHg, BTEX and MTBE (all wells), TPHd (MW-7 and MW-8), and TPHmo (MW-8 only), unless otherwise directed by the HCDEH.
- Currently, the groundwater extraction system is operating as designed, controlling the downgradient migration of, and recovering, dissolved-phase petroleum hydrocarbons. Operation of the GWE system should continue. At a minimum, the system will be monitored and sampled on a monthly basis.

- Blue Rock will continue to evaluate the breakthrough of MTBE in the system effluent (0.76 µg/L on April 4, 2006 and 0.57 µg/L July 7, 2006) and will schedule a change out of carbon prior to approaching the limit of 200 mg/L "strength factor" per the City of Fortuna discharge permit.

Certification

This report was prepared under the supervision of a California Professional Geologist at Blue Rock. All statements, conclusions, and recommendations are based upon published results from past consultants, field observations by Blue Rock, and analyses performed by a state-certified laboratory as they relate to the time, location, and depth of points sampled by Blue Rock or others. Interpretation of data, including spatial distribution and temporal trends, are based on commonly used geologic and scientific principles. It is possible that interpretations, conclusions, and recommendations presented in this report may change, as additional data become available and/or regulations change.

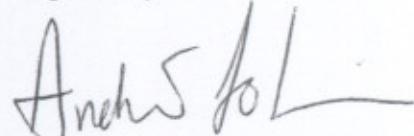

Information and interpretation presented herein are for the sole use of the client and regulating agency. The information and interpretation contained in this document should not be relied upon by a third party.

The service performed by Blue Rock has been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the area of the site. No other warranty, expressed or implied, is made.

If you have any questions regarding this project, please contact us at (707) 441-1934.

Sincerely,
Blue Rock Environmental, Inc.

Notes:

- TOC: Top of well casing referenced to mean sea level (msl).
 DTW: Depth to water as referenced to top of casing.
 SPH: Separate phase hydrocarbon on top of groundwater.
 GWE: Groundwater elevation as referenced to benchmark.
 $\mu\text{g/L}$ = micrograms per liter
 MCL: maximum contaminant level, a drinking water standard
 TPHg: Total Petroleum Hydrocarbons as Gasoline by EPA Method 5030/8260B
 TPHd: Total Petroleum Hydrocarbons as Diesel by EPA Method 3510/8015M
 TPHmo: Total Petroleum Hydrocarbons as Motor Oil by EPA Method 3510/8015M
 --: Not analyzed, available, or applicable
 NCRWQCB: North Coast Regional Water Quality Control Board
 Sample date in parentheses indicates new well survey per geotracker (NGS(PID#AC9252) "HPGN D CA 01 PB" Singley Rd)
 1. Laboratory analysis for diesel and/or motor oil was performed using silica gel cleanup
- B: Benzene by EPA Method 8260B
 T: Toluene by EPA Method 8260B
 E: Ethylbenzene by EPA Method 8260B
 X: Xylenes by EPA Method 8260B
 MTBE: Methyl tertiary butyl ether by EPA method 8260B
 TBA: Tertiary butyl alcohol by EPA method 8260B
 DIPE: Di-isopropyl ether by EPA method 8260B
 ETBE: Ethyl tertiary butyl ether by EPA method 8260B
 TAME: Tertiary amyl methyl ether by EPA method 8260B
 Meth: Methanol by Method 8260B
 Eth: Ethanol by Method 8260B

Total Mass of Hydrocarbons Recovered (in lbs)							0.99
Total Volume of Hydrocarbons Recovered (in gals)							0.16
(assuming gasoline density of 6.08 lbs/gal)							

Notes

Initial startup of system - September 6, 2005

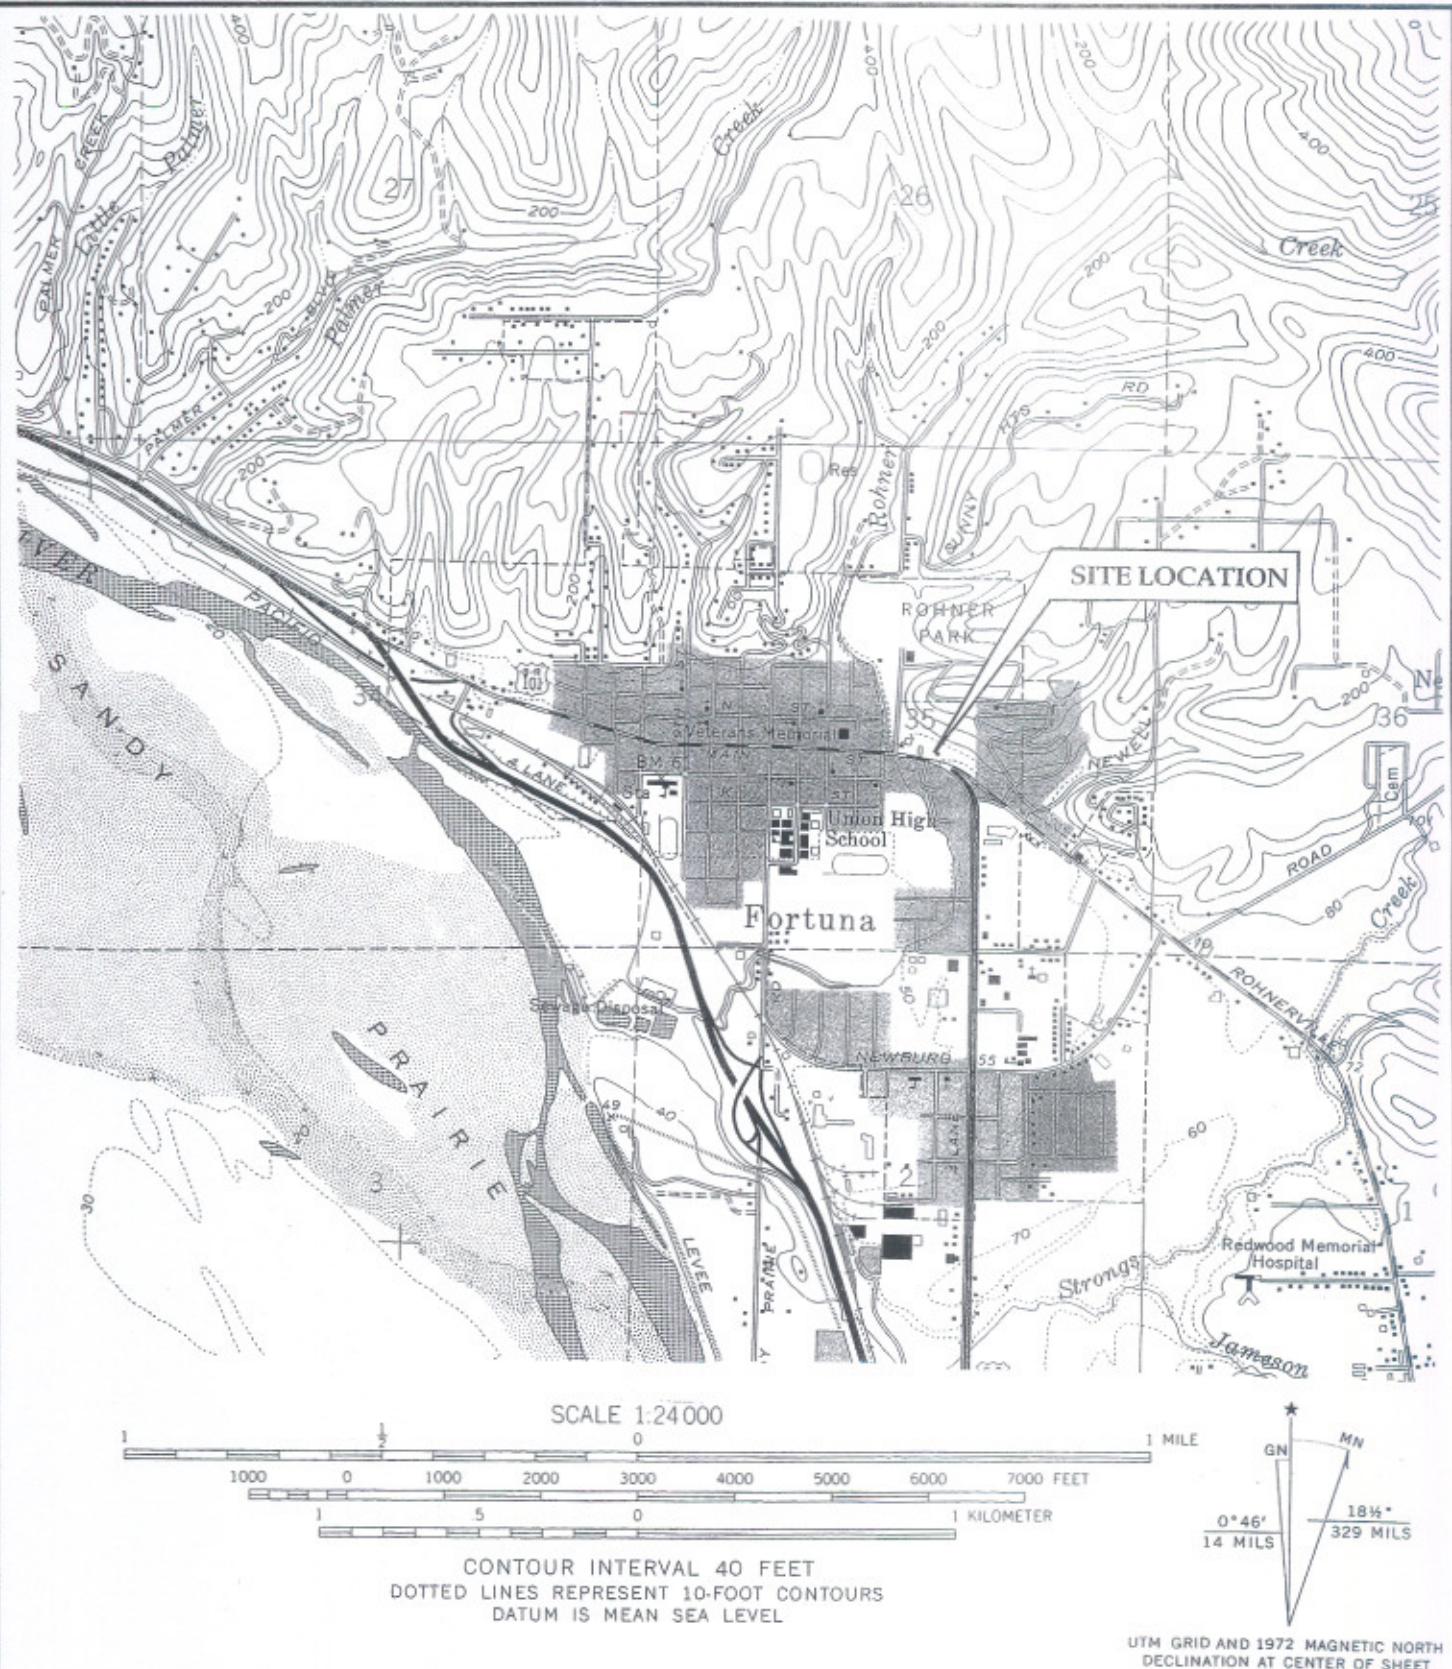

- A: Cumulative volume of groundwater recovered and discharged (gal), flow from EX-1
- B: Volume of groundwater recovered and discharged for period (gal)
- C: Conversion factor of 3.875 liter / 1 gal
- D: TPH concentration (µg/L) of groundwater flow from EX-1
- E: Conversion factor of 1 lbs / 453,600,00 micrograms
- F: TPH recovered for period (lbs) = B (gal) * C (L/gal) * D (µg/L) * E (lbs/µg)
- G: Cumulative TPH recovered for period (lbs)

GAGING DATA/PURGE CALCULATIONS

Job No.: NC-20 Location: 1666 Main st, Fortuna Date: 7/10/06 Tech(s): J.L.

Explanation:

DIA_w = Well Diameter

DTB = Depth to Bottom

DTW = Depth to Water

ST = Saturated Thickness (DTB=DTW)

CV = Casing Volume (ST x cf)

PV = Purge Volume (standard 3 x CV)

SPH = Thickness of Separate Phase Hydrocarbons

Conversion Factors (cf):

2 in. dia. well cf = 0.16 gal./ft.

4 in. dia. well cf = 0.65 gal./ft.

6 in. dia. well cf = 1.44 gal./ft.

Andrew LoCicero
Blue Rock Environmental, Inc.
535 3rd Street, Suite 100
Eureka, CA 95501

Subject : 15 Water Samples
Project Name : Dave's 76
Project Number : NC-20

Dear Mr. LoCicero,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink, appearing to read "Joel Kiff".

Joel Kiff

Case Narrative

The Method Reporting Limit for TPH as Diesel is increased due to interference from Gasoline-Range Hydrocarbons for sample MW-7.

Approved By:

A handwritten signature in black ink that reads "Joe Kiff". The signature is written in a cursive style with a long, sweeping line extending from the left side.
